YOKOHAMA, 24 July 1958

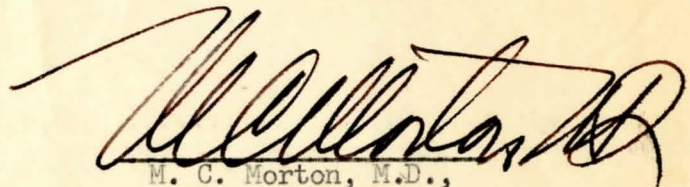

## TO WHOM IT MAY CONCERN

Mr. Tsugi KANAMORI, age 35, reported to the Bluff Hospital requesting a certificate of ill health for the purpose of establishing dependency.

He gives a history of having had asthmatic attacks since childhood, which consists of shortness of breath occurring once a week and which have been aggravated since coming to Japan.

He brought with him a certificate signed by the "Atsumi Clinic" of Tokyo which states that Mr. Kanamori has been under treatment for the past four years for "cardiac asthma".

Physical examination here on 23 July 1958 was done and we were unable to confirm the diagnosis of "cardiac asthma". Mr. Kanamori, however, does exhibit all the physical signs of bronchial asthma, and his symptoms were readily relieved by intravenous injection of aminophyllin. Physical examination was otherwise within normal limits.
