

In co-operation with the Educational Division, Groups of Children were given a "conducted tour" of the Hospital.

After a tour, letters such as these would be received.

Dear Miss Clark:

I thank you for letting us see the hospital.

There was a boy in our group that fell down and he had a chance to be treated.

I think that boy named Hitochi, who was going to have his tonsils out was kind of scared. I didn't know that the blood was kind of reddish-purple and that was very interesting. When I went in to see the operating room there were many funny instruments and the kick pan was first time I saw it and that was a funny pan.

I like that machine that they use for sucking the blood or water from wounds.

I didn't know that they had that any microscope.

yours truly,

yoji takahiro

Dear Miss Clark:

I appreciate your kindness for showing us the hospital.

It was very interesting for you to treat the wound for Leo in the clinic. I was glad to see the sterilizing machine. The operating room was especially interesting because one member of our class expected to have his tonsils removed soon. There were many instruments that I had never seen before.

In the laboratory a technician was looking through a microscope. There was blood under the microscope. He let us look through the microscope.

The wards were interesting too.

I hope we will get to go again.

Sincerely yours,  
Sachio Yamamoto
