

TO THE RESIDENTS OF HEART MOUNTAIN

This is to call the attention of all residents of the Center the essential agricultural program to be carried on here and the importance of the Canal in this program.

Because our country is at war, many food items are rationed. Already quite a few things are impossible to get. Though the government is now providing food for us, we are going to have to produce much of our own food in the future in order to adequately feed our people. To do this, we must irrigate most of the land to be used for agriculture. The canal work must be completed in a very short time so that there will be no delay when the planting season begins. Many workers are needed now; we are asking the cooperation of both issei and nisei to apply for canal work at the employment office in the administration building. Transportation and lunches are provided for canal workers.

We will appreciate your cooperation and hope that many of you will turn out for this all important task.
