

HEALTH

We petition that the following health problems be presented to a proper authority for equitable solution:

1. We have only four evacuee doctors to the total population of 9,200 residents. The standard established by WRA, we understand, is one doctor to every 1,400 persons. We believe the maintenance of this standard is absolutely necessary if we are to receive adequate medical care. To meet this standard our center must secure the service of at least two more doctors. We hereby request for such increase.
2. A number of psychopathic patients is placed in our hospital with no special equipment or facilities and without a specialist's care. We ask either for the installation of proper facilities and hiring of a specialist or sending patients out to an outside institution which is equipped to handle mental cases.
3. At present we are receiving limited dental service free of charge. Bridge and plate work are done at the patient's expense. We request for all standard dental services free of charge which are considered as a part of modern health requirement.
